

Project Report Guidelines

Disaster Management (CE8.401)

1. Report Structure

1.1. 1. Title Page

Include:

- Project Title
- Student Names and IDs

1.2. Abstract

Provide a concise summary (150–250 words) including:

- Problem statement
- Approach or methodology
- Key results
- Impact or significance or learnings

1.3. Introduction

- Background of the problem
- Motivation
- Scope of the project
- Clear definition of the problem
- Target users or stakeholders
- Objectives of the project

1.4. Disaster Context and Domain

- Type of disaster
- Geographic and demographic context
- Historical data or case references
- Risk factors and challenges

1.5. Methodology / Approach

- Overall framework or workflow
- Algorithms or models used
- Justification of chosen approach
- Key components and modules
- Technologies used

1.6. Data Description

- Data sources
- Data collection methods
- Preprocessing steps
- Assumptions and limitations

1.7. Results and Analysis

- Outputs and findings
- Evaluation metrics
- Visualizations and interpretations

1.8. Limitations

- Technical limitations
- Data-related limitations
- Practical constraints
- Challenges faced (if any)

1.9. Code Reproducibility

Students must ensure their work is reproducible and accessible:

- Provide a repository link (e.g., GitHub)
- Include project structure description
- Setup instructions and dependencies
- Dataset access instructions
- Step-by-step instructions to reproduce results

1.10. Conclusion

- Summary of work
- Key insights and contributions

1.11. References

- List all sources cited
- Follow a consistent citation style (IEEE/APA)

2. General Guidelines

- Maintain clarity and structure
- Use figures and tables where appropriate
- Ensure proper citation of sources
- Keep the report concise but comprehensive
